Course Overview

The nervous system controls everything we think, do, and feel. But how does it do this? And what happens when things go wrong? In this course, we will answer these questions by providing an introduction to the study of brain (neuroscience). We will cover basic concepts in neuroscience such as neurons, action potentials, and synapses and examine their involvement in everyday life. We will explore what neuroscience has already uncovered about human development, aging, and disease. The course is meant to serve as an introduction to neuroscience for students of all majors.

Mason Core: Natural Science, Non-lab

This is a Natural Science, non-lab Mason Core course. This course aims to enhance your understanding of scientific inquiry by introducing you to the tools and methods of neuroscience as well as the application of emerging neurotechnologies for personal, medical, and social purposes.

Natural Science Core Learning Goals

Natural science learning goals and the course activities that support them are listed below.

- Understand how scientific inquiry is based on investigation of evidence from the natural world, and that scientific knowledge and understanding:
  a) evolves based on new evidence
  b) differs from personal and cultural beliefs
     - Evidence Based Science Unit: lecture, in-class activity, homework assignment
     - Neuroscience and Society Project

- Recognize the scope and limits of science.
  - Evidence Based Science Unit: lecture, in-class activity, homework assignment
  - Neuroscience and Society Project
  - Neuroethics Unit: lecture, in-class activity, homework assignment

- Recognize and articulate the relationship between the natural sciences and society and the application of science to societal challenges (e.g., health, conservation, sustainability, energy, natural disasters, etc.).
  - Neuroscience and Society Project
  - Methods and Emerging Technologies Unit: lecture, in-class activity, homework assignment

- Evaluate scientific information (e.g., distinguish primary and secondary sources, assess credibility and validity of information).
  - Evidence Based Science Unit: lecture, in-class activity, homework assignment
  - Sources Unit: lecture, in-class activity, homework assignment
  - Neuroscience and Society Project
Neuroscience Learning Goals
Neuroscience content-specific learning goals are listed below.

- Describe how the human nervous system is organized from development into adulthood.
- Understand the key mechanisms of brain activity such as action potentials and brain waves.
- Describe how the brain mediates our daily activities from sleep to eating to remembering.
- Appreciate how the nervous system controls complex activities such as movement.
- Understand the basis of key human brain diseases such as Alzheimer’s and Parkinson’s Disease.
- Find and interpret various types of scientific literature, distinguish the quality of and relevance of sources.
- Evaluate current ethical debates in neuroscience.
- Describe how current technology is used to advance understanding in neuroscience.

Textbook and Materials

Grading:
Neuroscience and Society Project 10%
Homework Assignments 10%
Regular Exams (3x20% each) 60%
Final Exam (semi-cumulative) 20%

Total Grade 100%

Grading Scale:
A+ 97-100%  B+ 87-89%  C+ 77-79%  D 60-69%  F 0-59%
A  90-96%  B  80-86%  C  70-76%

Neuroscience and Society Project: The goal of this assignment is to apply your new knowledge of neuroscience to examine a current problem or social issue. A list of possible problems is here:

- Drug and behavioral treatment for mental illness in children
- Animal models of human brain disease (examples: Alzheimer’s Disease, Schizophrenia)
- Human-machine interface technologies
- Treatment for nervous system disease
- Genetic testing for brain disease and/or intelligence
- Gene editing to treat brain disease

For this project, you work in groups to research a topic through primary scientific literature and prepare an informational booklet that defines and examines the problem through the lens of neuroscientific evidence. Further details of the project will be provided in class.

Homework Assignments: There will be 3 homework assignments throughout the course. The homework assignments focus on solidifying and assessing your understanding of the Scientific Principals units. Homework assignments are due to blackboard before class on the given due date.

Exams: There will be 3 regular exams and 1 semi-cumulative final exam. These exams will consist of multiple choice, fill in the blank, short answer, and/or essay questions. Each exam will count for 20% of your final grade.
**Attendance and Make-up Policy**
You are expected to attend class and participate in all discussions and activities, but attendance will not be recorded. Attendance is an integral part of this course, and absences will result in significant missed information. **NOTE: You are responsible for all announcements and syllabus modifications made in class each week whether you are present or not.**

**Communication**
If you need to contact me, please do so using e-mail **from your university account only**, and **include the course name in the subject line and include your name in the e-mail**. Check your e-mail and course Blackboard account daily and before each class meeting. I will use e-mail and Blackboard to communicate with you regarding changes related to the course, syllabus, and other essential information. You are responsible for all announcements posted and sent via Blackboard and e-mail, in addition to announcement made in class.

**Student Conduct Policies**
Be kind and respectful to your classmates, Disruptive, disrespectful, or rude behavior will lead to dismissal from class, a potential deduction of points from the course, and an unhappy me. You will also miss out on all the cool things we do in class!

**Cell phones in the classroom:** Please silence phones during class. Texting is not allowed. Cell phone use/ringing (other than for emergency) during class may result in deduction of points from the course participation grade.

**Computers in the classroom:** Each class will have the opportunity to set their own rules regarding the use of computers in the classroom, with anonymous (or not, up to you) student reporting being used as enforcement. Failure of students to observe their own rules will result deduction of points from the course.

**Academic Integrity**
Honesty and integrity are issues at the very core of this course and of science as a whole. George Mason has an honor code with clear guidelines for academic integrity. A few of the most important rules that pertain to this course are as follow: 1) All work submitted must be your own should be done individually unless explicitly stated otherwise. You will be encouraged to discuss ideas, collaborate, and brainstorm with your classmates, but actual assignments need to be completed individually. 2) When referencing the work of others (this includes published and non-published work or ideas), full credit must be given through appropriate citations. 3) If you are ever unsure about the rules for an assignment, ask for clarification. Cheating and plagiarism of any form is not tolerated. Plagiarism means using the exact words, opinions, or information from another person without giving the appropriate credit. Any offense will result in a grade of F for the course and will be dealt with in accordance with university regulations.

**Disability Accommodations**
If you have a documented learning disability or other condition that may affect academic performance you should: 1) make sure this documentation is on file with Office of Disability Services (SUB I, Rm. 4205; 993-2474; http://ods.gmu.edu) to determine the accommodations you need; and 2) talk with me to discuss your accommodation needs.

**Mason Diversity Statement***
George Mason University promotes a living and learning environment for outstanding growth and productivity among its students, faculty and staff. Through its curriculum, programs, policies, procedures, services and resources, Mason strives to maintain a quality environment for work, study and personal growth.
An emphasis upon diversity and inclusion throughout the campus community is essential to achieve these goals. Diversity is broadly defined to include such characteristics as, but not limited to, race, ethnicity, gender, religion, age, disability, and sexual orientation. Diversity also entails different viewpoints, philosophies, and perspectives. Attention to these aspects of diversity will help promote a culture of inclusion and belonging, and an environment where diverse opinions, backgrounds and practices have the opportunity to be voiced, heard and respected.

*This is an abbreviated statement; full statement is available at http://ctfe.gmu.edu/professional-development/mason-diversity-statement/

**Privacy and E-mail Use**

Students must use their MasonLive email account to receive important University information, including communications related to this class. I will not respond to messages sent from or send messages to a non-Mason email address.

**Add/Drop Deadlines**

- Last day to add: September 3
- Last day to drop (no tuition penalty): September 9
- Final drop deadline (50% tuition liability): September 17
- Self-Withdrawal period (100% tuition liability, W on transcript): September 18 – September 30
- Selective-Withdrawal period (100% tuition liability, W on transcript): October 1– October 29
## Course Schedule

**NOTE:** This schedule is subject to change at any time. You are responsible for all announcements and syllabus modifications made in class each week whether you are present or not.

**Scientific Principals Unit Descriptions:**

All scientific principals units will include in-class activities or guided discussions and be followed by a homework assignment.

*Scientific Principles I and II: Evidence-Based Science:* This unit will focus on how evidence is used to draw conclusions in science, on variable scales. In-class activities will focus on discriminating the conclusions that can and cannot be drawn from a given set of data.

*Scientific Principals III: Sources:* This unit will focus on finding and consuming scientific information. During in-class activities students will use databases to find primary and secondary sources of information to answer a given question. As a class we will discuss ways to evaluate scientific information in the news and on social media. We will also cover how to properly cite and reference sources.

*Scientific Principals IV: Science and Society:* This unit will be used to survey several societal challenges related to neuroscience and to introduce the Science and Society Project (described in the Assignments section above)

*Scientific Principals V: Methods and Emerging Technologies:* This unit will survey commonly used methods in neuroscience that students are likely to encounter when reading literature. We will also discuss new and emerging technological advances.

*Scientific Principals VI: Neuroethics:* This unit will delve into several current ethical debates in neuroscience. We will debate ethical dilemmas in a structured format in class.
