

**GEORGE MASON UNIVERSITY
COLLEGE OF SCIENCE
BIOLOGY DEPARTMENT SEMINAR
Fall 2015**

Barbara Bowles Biesecker, PhD, MS, CGC
Director, JHU/NHGRI Genetic Counseling Program
Associate Investigator SBRB/NHGRI/NIH

***“Genetic conditions and risk: Making decisions to learn
predictive information and living with the results”***

Advances in genetics have led to describing this as the Genomic Medicine Era. There are expanding ways to learn more about a developing baby, a future health risk for inherited cancer and heart disease and to identify the cause of rare undiagnosed conditions. The decisions facing patients and increasingly the public put genomics at the forefront of integrating new technologies into medical care. Learn about how research participants make decisions under uncertainty and patients live with the consequences of their choices to use genetic technology.

TUESDAY November 10, 2015

3:00-4:15 PM
