Course Description

This course provides a survey of cultural, physical, and societal aspects of major world regions. It examines how forces across various scales shape the character of place. It explores how regions differ from one another and interrelate in our globalizing world. Acquiring a familiarity with and a foundation in the geography of the world regions allows us to ask more critical questions about the unevenness of various geographical processes and patterns on the landscape in addition to reflecting on our own role in the larger world. Satisfies the Mason Core Global Contexts (and the former Global Understanding) Requirement.

Learning Outcomes

- Use geographic tools and data to profile place
- Identify the distribution of patterns of human and physical geographical features across the globe and describe the geographical processes that explain said patterns
- Identify and explain how patterns of global connections across nations and/or cultures have shaped societies to create interdependence and inequality.
- Use a disciplinary lens to demonstrate knowledge of how at least one nation and/or culture participates in or is affected by global contexts.
- Apply an understanding of one's own positionality within a globally interdependent and unequal world to analyze solutions to global problems.
- Explore individual and collective responsibilities within a global society through analytical, practical, or creative responses to problems or issues, using resources appropriate to the field
