

***Human-wildlife coexistence in
shared landscapes: Innovations in
science, technology and policy***

**Jennie Miller
Senior Scientist, Center for Conservation
Innovation, Defenders of Wildlife**

She is a wildlife ecologist and conservation scientist who studies human-wildlife coexistence and the costs and effectiveness of approaches for protecting biodiversity globally. She also conducts research and publishes on diverse topics related to threatened and endangered species conservation, including human-wildlife conflict and coexistence, conservation methods effectiveness, transboundary conservation and protected area management.
