This is a graduate-level course in classical mechanics. We will be using [Classical Dynamics](#) by Goldstein, Poole and Safko. The class will include the following chapters in Goldstein:

- General formulation of classical mechanics (chapters 1, 2, 8, 9 and supplemental material)
- Applications (chapters 3-6)
- Generalizations and modern topics, if time permits (chapters 9-13 and supplemental material)

Other Notes:

- [Errata web page for Goldstein](#)
- An amusing [central force integrator](#) from the University of Maryland

Recommended books - (the bulk of the course will be drawn from the first two books listed below, with supplemental material from the last two):

- [Classical Dynamics](#) by Goldstein, Poole and Safko. A classic, very good in some areas, not so good in others. Watch out for the typos.
- [Classical Dynamics of Particles and Systems](#) by Marion and Thornton. An advanced undergraduate textbook with lots of examples and some very useful mathematical tables in the appendices. This book covers much of the material in the earlier chapters of Goldstein, but in a more didactically effective way, in my opinion.
- [Classical Dynamics - A Contemporary Approach](#) by José and Saletan. A very nice but rather wordy book that presents a more modern approach using fancier mathematics.
- [Mechanics](#) by Landau and Lifschitz. A very very concise book, very elegant, but it is most useful and best appreciated after you already know the material.

Honor Code: It is expected that students adhere to the George Mason University Honor Code as it relates to integrity regarding coursework and grades. The Honor Code reads as follows: **To promote a stronger sense of mutual responsibility, respect, trust, and fairness among all members of the George Mason University community and with the desire for greater academic and personal achievement, we, the student members of the University Community have set forth this: Student members of the George Mason University community pledge not to cheat, plagiarize, steal and/or lie in matters related to academic work.** More information about the Honor Code, including definitions of cheating, lying, and plagiarism, can be found at the Office of Academic Integrity website at <http://oai.gmu.edu>.

If you are a student with a disability and you need academic accommodations, please see me and contact the Disability Resource Center (DRC) at 993-2474. All academic accommodations must be arranged through the DRC.

This table describes what is planned for the lectures and where you can read more about the material.

The content of future lectures is subject to change depending on how things go.

G = Goldstein; J&S = José & Saletan; T&M = Thornton & Marion.

| | | |
|------------------------|--|---|
| Lecture 1 08/23 | Review of Newtonian Mechanics Constraints Geometric argument for D'Alembert's principle | G 1.1, 1.2 G 1.3 J&S 2.1.1 , 2.1.2 |
| 08/30 | Last Day to Add | |
| Lecture 2 08/30 | Virtual work argument for D'Alembert's principle Derivation of Lagrange's equations from D'Alembert's principle Examples | G 1.4 G 1.5 G 1.6; T&M example 7.5; classnotes |
| 09/06 | Labor Day (no class) | |
| Lecture 3 09/13 | Calculus of Variations, examples Hamilton's principle Generalization, constraints, Lagrange multipliers, examples | G 2.2 (but watch out!); T&M 6.1-6.4; classnotes G 2.1 2.3; T&M 6.5-6.6 |
| Lecture 4 09/20 | Examples, continued (constraints & Lagrange multipliers) Symmetries and conservation laws, conservation of energy | G 2.6, 2.7 |
| Lecture 5 09/27 | Start the central force problem | G 3.1-3.3, 3.5 T&M 8.1-8.6 |
| Lecture 6 10/05 | Three solutions to the Kepler problem | G 3.6-3.9 T&M 8.7 classnotes |
| 10/11 | Fall Break (class meet on Tuesday (10/12) instead) | |
| Lecture 7 10/12 | Hamilton's Equations of Motion | G 8.1-8.3 T&M Chapter 7.10 |
| Lecture 8 10/18 | Hamilton's Equations of Motion (cont), Canonical Transformation, and Poisson Brackets | G 8.5-8.6 G 9.1-9.5 T&M Chapter 7.10 |
| Lecture 9 10/25 | Generating Functions, Equations of Motion & Canonical Invariants, Hamilton- Jacobi Equation & Hamilton Principal Function | G 9.1-9.6 G 10.1-10.2 |
| Lecture 10 11/01 | Oscillations | G 6.1-6.4 T&M Chapter 12 |
| | Depending on progress of the class and available time, other lecture topics might also be including in the remaining lectures. | |
| Lecture 11 11/08 | Math review for rigid body motion Non-inertial reference frames, Euler Angles | Classnotes G 4.1-4.4 T&M Chapter 10 |
| Lecture 12 11/15 | Coriolis force, Rigid body motion, angular momentum | G 4.6-4.10 G Chapter 5 T&M Chapter 11 |
| Lecture 13 | Moment of inertia tensor, Euler equations of motion; motion of a torque-free rigid body | G Chapter 5 T&M Chapter 11 |

| | | |
|-------------------------|---|-------------------------------|
| 11/22 | | |
| Lecture 14 11/29 | Motion of a torque-free rigid body and a symmetric top in gravity | G Chapter 5 T&M Chapter 11 |
| Reading Day 12/06 | Reading Day | |
| Final Exam 12/13 | Final Exam | |
