

## Department of Geography and Geoinformation Science

4400 University Drive, MS 6C3, Fairfax, Virginia 22030  
Phone: 703-993-1210, Fax: 703-993-9299  
Email: ggs@gmu.edu Web: ggs.gmu.edu

# GGG 379 – Remote Sensing Fall 2018

## 1. General Information

**Instructor:** Dr. Konrad Wessels  
**Email:** kwessel4@gmu.edu  
**Where:** Exploratory Hall 2312  
**When:** Mondays 1:30pm-4:10pm.  
**Course website:** Blackboard  
**Credits:** 3.0  
**Prerequisites:** None  
**Instructor's Office Hours:** Tue 10:00am - 11:00am, Wed 10:00am – 11:00m or by appointment (My office is located in Exploratory Hall 2203, the Fairfax Campus).

**Contact method** Blackboard discussion board or email. I will make every effort to respond within 24-48 hrs, Monday to Friday during regular business hours.

## 2. Course Objectives

The world is currently experiencing a proliferation in image data from satellites, aircraft and UAV's. These images have to be processed to produce geospatial information to inform natural resource management, urban planning and business decisions. This course will introduce the foundations of remote sensing, as well as the processing and analyses of imagery for diverse applications. The course will introduce key concepts in electromagnetic radiation, passive (multi-spectral) and active (microwave and Lidar) sensor systems, and methods for image processing, classification and geospatial information extraction.

## 3. Learning Outcomes

By the end of the course each student will be able to:

- A. Understand and explain the key theories of remote sensing and image analysis.
- B. Use image processing tools to acquire and process imagery to geospatial products.
- C. Gain fundamental insight into the use of remote sensing for multiple, real-world applications.

## 4. Delivery Method

The course will be taught as a combination of lectures, tutorials, hands-on image processing, class discussion and assignments.

## 5. Textbooks

The primary textbook is "Remote Sensing and Image Interpretation" by Lillesand, Kiefer and Chipman (7<sup>th</sup> edition, John Wiley & Sons).

## 6. Course outline (tentative)

In this course we will cover the following topics (subjected to change at the discretion of the instructor):

- Introductory Concepts
  1. Energy Sources
  2. Energy Interactions
  3. Remotely Sensed Data/Imagery

4. Remote Sensing Systems
  - Photographic and Photogrammetric Principles
    1. Filters
    2. Electronic Imaging
    3. Geometric Characteristics of Photographs
  - Image Analysis and Interpretation
    1. Fundamentals
    2. Various Applications
  - Digital Image Processing: Summary & New Concepts
    1. Image Enhancement
    2. Image Manipulation
    3. Information extraction; Applications
  - Multispectral Remote Sensing/Thermal Imaging
    1. Physical principles
    2. Algorithms
    3. Information extraction; Applications
  - Remote Sensing Systems/Hardware; Airborne and Satellite
    1. Landsat, Sentinel2, WorldView
    2. Other sensors
  - Microwave and Lidar Sensing
    1. Physical principles
    2. Systems and sensors
    3. Information extraction; Applications

## 7. Grading

Assignments	25%
Midterm exam	30%
Final exam	25%
Mini-project	20%
<b>Total:</b>	<b>100%</b>

## 8. Assignments:

Submission of assignments should be done only **through the Blackboard course website**.

## 9. Course website:

The course has a Blackboard website. This website will provide you a single portal through which you may obtain lecture notes, retrieve assignment data and, review links to additional materials, and receive special announcements. You are required to visit the course website **regularly**.

## 10. Electronic Communication:

All course related email correspondence should be made through @gmu.edu addresses.

**Note:** Recording of any kind (audio, video), reuse of course materials, and further dissemination of the course contents is not permitted unless prior written consent of the professor and George Mason University has been given or if recording is part of an approved accommodation plan.
